Florida has a well-documented herpetofauna, and its exotic herpetofauna has grown considerably over the last few decades since the classic reviews by King and Krakauer (1966) and Wilson and Porras (1983). Florida's diverse habitats, warm climate, and thriving pet trade have facilitated the establishment and subsequent range expansion of many exotic herpetofaunal species. While conducting surveys throughout Florida from May 2000 through October 2003, we documented new county records for both native and exotic species. Additional new county records were

- 82°01.89'W). 3 June 2003. K. L. Krysko, C. S. Samuelson, B. L. Talley, K. L. Bell, and F. W. King. UF 137017. Adult female on wall of Circle K store; two other adults observed here, and six adults observed at another site in the area.
